UNITED STATES OF AMERICA BEFORE THE FEDERAL ENERGY REGULATORY COMMISSION

New York Independent System Operator, Inc.)	Docket Nos. ER16-120-007
)	EL15-37-003

MOTION TO INTERVENE AND COMMENTS OF THE NEW YORK ISO'S MARKET MONITORING UNIT

Pursuant to Rules 212 and 214 of the Rules of Practice and Procedure of the Federal Energy Regulatory Commission (Commission), 18 C.F.R. §§ 385.212 and 214 (2007), Potomac Economics respectfully moves to file comments concerning the NYISO's May 23, 2018 compliance filing in the above-captioned proceedings. The NYISO's compliance filing contains proposed tariff provisions related to the timeline of market power reviews and the data submission requirements in the context of the Generator Deactivation Process. We support the NYISO's proposed tariff revisions.

Potomac Economics is the Market Monitoring Unit ("MMU") for the NYISO and is responsible for monitoring the market and evaluating potential changes that impact the market.

I. NOTICE AND COMMUNICATIONS

All correspondence and communications in this matter should be addressed to:

Patton Potomac Economics, Ltd. 9990 Fairfax, Boulevard, Suite 560 Fairfax, VA 22030 (703) 383-0720 dpatton@potomaceconomics.com Dr. Pallas LeeVanSchaick Potomac Economics, Ltd. 9990 Fairfax, Boulevard, Suite 560 Fairfax, VA 22030 (703) 383-0719 pallas@potomaceconomics.com Raghu Palavadi Naga Potomac Economics, Ltd. 9990 Fairfax, Boulevard, Suite 560 Fairfax, VA 22030 (703) 383-0783 raghu@potomaceconomics.com

II. COMMENTS

The Commission issued a series of orders between February 19, 2015 and April 23, 2018 to establish a process for retaining and compensating units needed for reliability. The NYISO's subsequent compliance filings in this matter included tariff provisions that would govern the generator deactivation process. In a December 18, 2017 filing, Entergy requested clarification regarding the deadline for the NYISO's market power reviews related to the retirement of Indian Point Units 2 and 3. In its April 23, 2018 order, the Commission denied Entergy's request that NYISO complete its market power review for Indian Point by March 13, 2018. However, it also directed the NYISO to file tariff provisions that would establish timelines for its market power reviews. The Commission indicated that establishing a timeline for the NYISO's market power reviews would enhance the transparency for the deactivating generators.

Accordingly, the NYISO in its compliance filing dated May 23, 2018 proposed changes to the tariff that cover, inter alia, issues related to the timeline for completing for market power reviews. The NYISO's filing contemplates and proposes market power review timelines for two types of deactivation events:

- 1. First, if a unit owner submits a complete request at least 60 days before its specified deactivation date, the NYISO would issue a determination based on a physical withholding analysis at least 30 days before the deactivation date.
- 2. Second, if the owner indicates that it is required to take irreversible decisions regarding the deactivation prior to the specified deactivation date (i.e. a trigger date), the NYISO

would issue a physical withholding determination at least 30 days prior to the trigger date.

As required by the Commission, the NYISO's proposed timeline works back from deactivation date rather than the complete notice date in both scenarios. This is good because the NYISO will be better positioned to perform its evaluation based on market conditions that are close to the time of deactivation.

Furthermore, in the second type of deactivation event, the NYISO (in consultation with the MMU) will determine whether the owner-specified trigger date is reasonable prior to issuing the physical withholding determination. The proposed tariff provision requires the NYISO to consider whether the deactivation process "will become, essentially and practicably, irreversible" beyond the trigger date. In some cases, it would be straightforward to determine whether a particular decision would be irreversible in the strictest sense. However, the proposed tariff language allows for the NYISO to apply reasonable judgement in cases where the *practical* implications of a particular decision would be expected to set a generator on a path towards deactivation.

For example, a nuclear plant may be able to defer refueling beyond the usual cycle, but this would lead it to forego significant energy market revenues without corresponding cost reductions. Thus, the decision to forego refueling would not be strictly irreversible, but it would adversely affect the outlook for the project to a significant degree. If the project was already uneconomic, the decision to forego refueling would significantly exacerbate the situation.

Similarly, there may be other types of capital expenditures (e.g. major maintenance expenditures), which if deferred, could result in higher costs or unreasonably increase the risk of reliable operation. Hence, delaying such decisions to act (or not act) could render the unit more

3

¹ See proposed MST §23.4.5.6.4.2.2.2.

capital expenditures was large relative to the overall economics of the project, such capital expenditures could be deemed "practicably irreversible," while if the capital expenditures were

uneconomic and may not be consistent with good utility practice. If the magnitude of such

relatively modest, they would not be deemed as such. We believe that the proposed tariff

language would allow the NYISO to consider and classify such decisions appropriately as

practicably irreversible for the purpose of physical withholding evaluations.

III. CONCLUSIONS

For the reasons stated herein, we find the NYISO's proposed tariff revisions to be

reasonable and respectfully recommend the Commission accept them.

Respectfully submitted,

/s/ David B. Patton
